Problem

Insert problem/question here

Students who are falling behind are found only at the exam session, when it is too late to catch up.

Why?

Why are students at risk found so late?

Because

Expand on your answer

During the semester nobody sees a student's real progress: the VNS shows "10/10 = 100 %" because it averages only the graded items.

Why?

Why does the VNS total not show real progress?

Because

Expand on your answer

Many lab grades reach the VNS late or never: lecturers keep them in their own Excel files and send them to the dean's office by email, each in a different format.

Why?

Why do lecturers keep grades outside the VNS?

Because

Expand on your answer

One lab lives in three places: the report is uploaded to the VNS, questions come as photos in messengers at night, and grades go to Excel.

Why?

Why is one lab split across three places?

Because

Expand on your answer

VNS courses have no live communication: an assignment is only a file upload, so questions and feedback have nowhere to go inside the course.

Why?

Why is an assignment only a file upload?

Because

Expand on your answer

The VNS was set up as a standard Moodle content repository; how lecturers, students and the dean's office actually work with labs was never mapped.

Root cause

There is no single workflow for a lab — task, submission, questions and grade in one place — so progress data is scattered, late and in different formats.
