Olena Kovalenko

OK

AGE	19
STATUS	Single
OCCUPATION	2nd-year Computer Science student
LOCATION	Lviv, Ukraine

> I just want to know what is due and what I actually understand — in one place.

Personality

Organised · Curious · Pragmatic · Social

Bio

Olena studies Computer Science at Lviv Polytechnic and lives in a student dormitory. She moves between lectures with her phone, keeps lecture notes in three different apps and discusses assignments with groupmates in Telegram. She likes practical labs, but regularly loses track of deadlines and materials scattered between the VNS, chats and e-mail.

Goals

- Submit every lab on time without last-minute panic
- Understand the theory during the semester, not the night before the exam
- Work with groupmates without chasing everyone in several chats

Core needs

- One place that shows deadlines, grades and materials for all courses
- A mobile-friendly interface that works between classes
- Short, searchable lecture summaries and a way to ask about unclear topics

Frustrations

- The grade summary is misleading: it shows 100 % after a single graded item
- Lectures are static PDFs with no notes, search or self-check
- There is no chat inside courses, so discussions get lost in Telegram
- The calendar is almost empty and cannot be imported from other apps

Andrii Melnyk

AGE	20
STATUS	Single
OCCUPATION	3rd-year student, team lead of a course project
LOCATION	Lviv, Ukraine

> If I cannot show who did what, I cannot defend the work of the whole team.

Personality

Responsible · Direct · Collaborative · Goal-driven

Bio

Andrii leads a team of five students working on a semester project. The team coordinates in Telegram, edits documents in shared files and assembles the final submission by hand. At the defence the lecturer asks who contributed what, and Andrii has to reconstruct it from message history.

Goals

- Split tasks fairly and see the progress of the team at a glance
- Submit the project once on behalf of the whole team
- Show the lecturer a clear contribution of every member

Core needs

- A team space with a task board and shared files inside the same platform as the course
- A contribution report per team member
- Notifications when a teammate misses a deadline

Frustrations

- The VNS has no team tools, so projects live outside the system
- Contribution of members is invisible to the lecturer
- Coordination is scattered across chats and documents
- He has to chase teammates manually for status updates

Dr. Iryna Shevchenko

AGE	41
STATUS	Married
OCCUPATION	Associate Professor, lecturer
LOCATION	Lviv, Ukraine

> I would like to answer a question once, not thirty times.

Personality

Experienced · Fair · Time-poor · Supportive

Bio

Iryna teaches programming and databases to more than 200 students per semester. She uploads lectures and assignments to the VNS and enters grades there, but answers the same questions again and again in messengers and e-mail. She has no quick way to see which groups are falling behind.

Goals

- Publish materials and assignments quickly
- Grade fairly and transparently
- Notice early which students or groups are falling behind

Core needs

- Activity analytics per group: who is active, who is late
- Reusable answers to frequent questions tied to the lecture materials
- Moderation tools for course discussions that a teaching assistant can use

Frustrations

- The same questions arrive by e-mail and in messengers
- There is no overview of the dynamics of a group
- The interface is outdated and overloaded
- Course discussions happen outside the system and cannot be moderated
