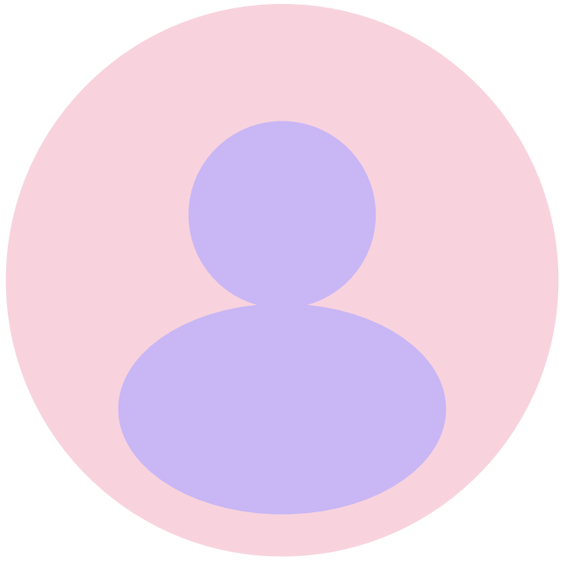
Andrii Melnyk



AGE	19
STATUS	Single
OCCUPATION	CS Student
LOCATION	Lviv, Ukraine

> I don't mind studying hard. I just want to know what to do next and who to ask.

Personality

Responsible · Curious · Sociable · Pragmatic

Bio

Andrii is a second-year Computer Science student at Lviv Polytechnic. He studied well at school and enjoys programming, but the university workload is much heavier than he expected. He has six to seven courses per semester, and each has its own deadlines, lab reports and PDF lectures. He uses the current VNS mostly as a file storage: he logs in to download materials and submit labs. All real communication happens in Viber and Discord chats, where important answers get lost among hundreds of messages. He often works on group projects with classmates and wants to be a reliable teammate.

Goals

- Submit all labs on time and keep a good GPA
- Understand theory quickly instead of re-reading long PDFs before exams
- Work smoothly with teammates on group projects

Core needs

- One place to see all deadlines, schedule and real grade progress across courses
- A way to ask questions and get answers inside the course, not in scattered messengers
- Short summaries, flashcards and self-check tests based on the actual lecture materials
- A simple mobile experience, since he mostly checks things on his phone between classes

Frustrations

- Course discussions live in Viber and Discord, so answers are hard to find later
- The grade summary is misleading (e.g. "100%" after one graded task), so he cannot see his real standing
- Lectures are static PDFs with no search, notes or self-testing
- Group work happens outside the system, and teachers cannot see who contributed what
- The interface is old and hard to use on a phone
