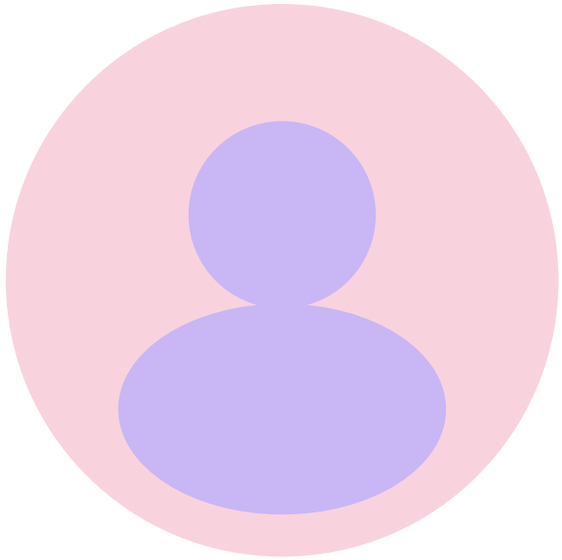
Olena Kovalenko



AGE	38
STATUS	Married
OCCUPATION	Lecturer
LOCATION	Lviv, Ukraine

> “ I want to teach, not to repeat the same answer fifty times.

Personality

Organized

Patient

Fair

Supportive

Bio

Olena is an associate professor at the Computer Science department of Lviv Polytechnic. She teaches programming to several second-year groups and supervises lab sessions. She uploads lectures and assignments to the current VNS, but it works for her mostly as a file storage: she has no view of how a group is really doing. Students write to her in Viber and by email with the same questions again and again, and she often learns about problems only when a deadline has already been missed. She wants to spend her time on teaching and fair grading, not on repeating answers and chasing students.

Goals

- Publish materials and assignments once and have them reach every group clearly
- Answer a typical question one time, so everyone can see the answer
- Grade fairly, including a fair view of each student's contribution in group projects

Core needs

- A simple way to see group activity: who is falling behind and who has not logged in
- Course discussions in one place, with answers that students can find later
- Notes attached to the exact place in a lecture, so explanations stay with the material
- Control over AI help: allowed for summaries, switched off for graded labs
- Quick setup of groups, subgroups and deadlines at the start of the semester

Frustrations

- The same questions arrive in Viber, email and after lectures, and she answers them many times
- No analytics, so she cannot see problems in a group before the deadline passes
- Group projects are done outside the system, so individual contribution is invisible
- Lecture files are static and she cannot add comments to a specific page or slide
- Worry that students will use AI or copy ready solutions for graded work
