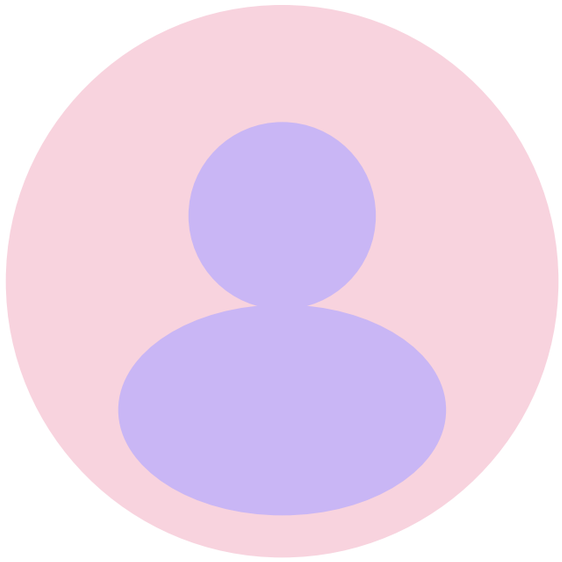
Nataliia Hrytsenko



AGE 45

OCCUPATION Dean's Office Specialist

LOCATION Lviv, Ukraine

> I don't want to find out about a problem when the exam session is already over.

Bio

Nataliia is an academic coordinator at the dean's office of the Institute of Computer Science at Lviv Polytechnic. She works with about forty student groups: she tracks academic progress, prepares reports for the dean and informs students about schedule changes, retakes and official deadlines. Today she collects grades from lecturers by email and in Excel files, each in a different format, and spends days merging them before every report. Official announcements go through group heads, and she never knows whether they reached every student. She wants to see problems early, while students can still catch up.

Goals

- See the progress of every group in one place, without collecting data by hand
- Find students at risk of failing early, while they can still catch up
- Make sure official announcements reach every student directly

Core needs

- Summary reports on grades and deadlines by group, course and semester, ready to export
- Early warnings about students with many missed deadlines or low activity
- Official announcements to selected groups or the whole institute, with read confirmation
- One up-to-date schedule where every change is visible to students and lecturers at once
- Access only to the data she needs for her work, with clear roles

Frustrations

- Grades arrive from lecturers in different formats, and she merges them manually in Excel
- Problems with students become visible only after the exam session, too late to act
- Announcements pass through group heads and messengers, and some students never get them
- Schedule changes are spread across paper notices, the website and group chats
- Preparing one report for the dean takes several days of routine work
