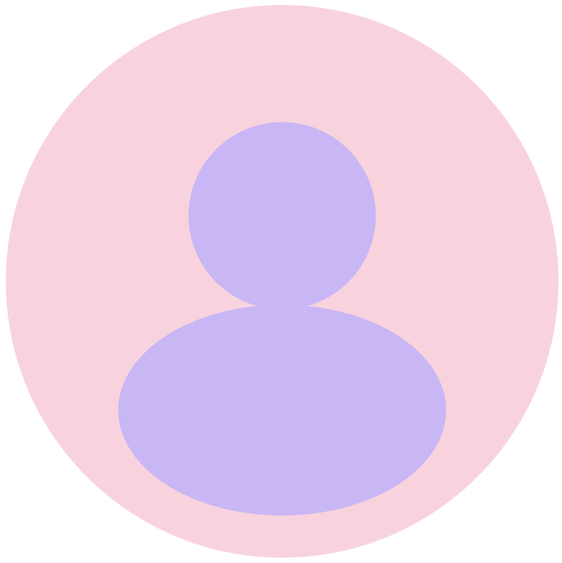
Sofiia Romaniuk



AGE 20

OCCUPATION SE Student

LOCATION Lviv, Ukraine

> My time is limited, so I need to know exactly what matters today.

Bio

Sofiia is a third-year Software Engineering student at Lviv Polytechnic. She also works part-time as a junior front-end developer, about twenty hours a week, so she studies mostly in the evenings and on her phone during the commute. She has seven courses this semester, and schedule changes, new deadlines and files appear in different chats, so she often learns about them too late. In group projects she usually becomes the team leader and ends up doing most of the work herself. For difficult subjects she would like to prepare together with students from other groups, but there is no place to find them.

Goals

- Combine part-time work with studies without missing a single deadline
- Prepare for exams in short evening sessions with clear, focused material
- Lead team projects where every member does a fair share of the work

Core needs

- A weekly plan that fits study sessions around her work hours and all course deadlines
- Instant notifications about schedule changes and new assignments
- Study Spaces to find students from other groups who prepare for the same topic
- AI summaries and self-check tests based only on the actual course materials
- A task board for team projects that shows who did what

Frustrations

- Schedule changes and new deadlines are posted in different chats, and she sees them too late
- Her work calendar and the university schedule live in separate places
- In team projects she does most of the work, and the lecturer cannot see it
- She has to scroll through hundreds of chat messages to find a file or an answer
- Studying from long PDF lectures on a phone during the commute is almost impossible
